 **UNIQA®**

High efficiency  
submersible electric pumps

# UNIQA®

High efficiency submersible electric pumps

CO<sub>2</sub> emissions reduction, lower costs and environmental protection, these are issues that affect us all closely and which we need to take care of for the sake of future generations.

**UNIQA** motors correspond to IE3 efficiency class and match S1 duty type standards for submerged operation at a temperature of 60° C, as per NEMA A.

In civil and industrial applications the reliability of a submersible electric pump is a synonym for smooth operation, steady performance and continuous work cycles without undesired system shutdowns.

For this reason, **UNIQA** is made of innovative materials and is equipped with cutting-edge technical features such as the new patented cooling system. All these attributes make **UNIQA** a safe and reliable product.

The **UNIQA** range represents the perfect solution for any domestic, commercial and industrial applications, with a choice of 2, 4, 6, 8, 10 or 12 pole motors from 4 to 355 kW, 50 and 60Hz, and discharge ports from DN65 to DN500. The vortex impeller that allows for wider free passage, paired with the anti-clogging system, guarantees the optimum performance of every **UNIQA** model in any circumstance.

2014 CATALOGUE  
50Hz

## Only use what you need: less waste, improved efficiency.

In emerging countries, the second largest expense in municipal budgets is generally the energy cost of water supplies. This situation is worsened by the fact that by 2020, 50% of the population of these countries will have moved to urban centres.

It is therefore clear that the energy consumed in supply drinking water and treating black water is destined to grow; at the present time, around 3% of world energy consumption is accounted by the pumping and treatment of civil and industrial water.

**It is critical that water systems be as efficient as possible, while reducing wastage to a minimum.**

## LCC: Life Cycle Cost

**Life Cycle Cost consists of 3 basic factors: initial costs, energy costs and maintenance.** It must be remembered that a pump or system's energy costs, together with installation, environmental, disposal and stoppage costs, account for **85 per cent** of the total cost. Maintenance then amounts to an additional 5 per cent. It thus becomes clear that **the initial cost only accounts for 10 per cent of LCC.**

Imagine the LCC as an iceberg, of which only 10% is visible, while the remaining 90% is concealed from view; in same way, the cost of an installation makes evident only the initial investment and conceals running and maintenance costs, which are by far greater than the initial purchase price.

Therefore, giving a submersible pump a highly efficient motor and internal components can guarantee impressive energy savings, recouping the extra investment compared to the purchase of a pump with the same hydraulic characteristics but poorer energy efficiency within just two years\*.

*\*Regular inspection of the system's components, operation and performance is essential for the achievement of efficiency targets.*

## The UNIQA solution

Starting from these considerations, Zenit has decided to orient its strategy towards the creation of products which satisfy restrictive efficiency and reliability criteria, thus minimising outages and running costs.

### UNCOMPROMISING EFFICIENCY

To reach the levels of efficiency set out in modern international standards, such as "**NEMA A**", Zenit has taken an uncompromising approach with UNIQA, a product intended to last for years in both civil and industrial settings, and which provides performance to **efficiency class Premium IE3**.

A wide choice of motors, from 4 to 355 kW with 2, 4, 6, 8, 10 and 12 pole windings, 50 / 60Hz power and DN65 to DN500 discharge ports, vortex impellers with full free passage and channels with anti-blockage systems, make the UNIQA series ideally suited to operation in any conditions.

The generously rated mechanical assemblies provide long service life, with long maintenance intervals and reduced downtime - all of which adds up to cost savings.

Performance is constant in continuous operation without costly downtime. The reliability of the submersible pump means smooth, regular operation. This is why UNIQA is made of innovative materials, using cutting edge technologies and a new patented cooling system.

## Efficiency, performance and reliability

The combination of **efficient motors, high hydraulic performance and reliability** give UNIQA a particularly high global efficiency rating, capable of ensuring a good return on investment over time.

### From words to deeds:

high efficiency, not just in performance,  
but also in running costs.

For a real understanding of how efficient UNIQA is, let's take a look at the figures for a small pumping station. Let's suppose we have calculated a "duty point" with a flow rate of 30 l/sec, lifted to a height of 13.5 m.

We now know we need a hydraulic power of 3,973 kW ( $P_{idr} = \rho \cdot g \cdot Q \cdot H$ ), for a total of 10 working hours a day (365 days/year), with an energy cost per kWh of 0.10 €/kWh. This is what our equipment aims to provide.

#### THE VALUE OF UNIQA

Let's compare the performance at the duty point indicated above of a UNIQA submersible pump with **efficiency class Premium IE3 and high efficiency hydraulics (in blue)** with that of an electric pump with **standard motor and conventional hydraulics (in black)**.

The example highlights the fact that using a **UNIQA pump with efficiency class PREMIUM IE3 (+6.2%) motor and high performance hydraulics (+33%) compared to a STANDARD pump, yields improved global system efficiency, at the duty point in question, of 6%, thus providing considerable cost savings.**

**1.240€**

THE EFFICIENCY ADVANTAGE OF A UNIQA PUMP WITH  
EFFICIENCY CLASS PREMIUM IE3 MOTOR AND HIGH  
PERFORMANCE HYDRAULICS CAN BE QUANTIFIED  
AT €1,240.00/YEAR OF COST SAVINGS

**NOTE:** All calculations are for example only. Energy costs can vary by supplier and consumption tariffs.

## How it is made

### Cable gland

The cable gland can be sealed with extra resin on request in order to prevent any possible leakage into the lid even if the cable gland seal fails.

### Motor compartment

Option to install one or more water/humidity sensors in the motor compartment.

### Motor shaft

The whole range is equipped with AISI 431 stainless steel shafts. The NITRONIC 50 version is also available upon request (this type of stainless steel has higher chemical and mechanical resistance compared to AISI 316 and AISI 329).

### Bearings

Oversized heavy-duty bearings designed for 50,000 hours of operation.

### Mechanical seals

Two silicon carbide mechanical seals in the oil sump and V-rings. The oil can be checked and changed even with the pump vertical, using plugs on the exterior of the mount.

### Flanges

Various flange drilling are available, including ANSI and BS.

## High efficiency motor

High-efficiency PREMIUM IE3 motors function, in accordance with NEMA A standard, and insulation in class H.

Guaranteed S1 duty type in fluids at 60° C or higher temperature.

Generally, since energy costs are higher than other expenses, continuous duty provides higher savings compared to a conventional system and the initial investment in a **high efficiency systems** is soon recouped, without considering the considerable advantages in terms of environmental footprint.

	Operation (hours/year)			COST (%)
	2000	4000	6000	
Purchase	3.8	1.9	1.3	
Maintenance	1.0	1.0	1.0	
Energy	95.2	97.1	97.7	

## Clogging-proof hydraulics

All hydraulic components are designed to provide highest efficiency and best performance combined with wide free passage.

Choice of 2 impeller types:

**vortex** and high-efficiency **channel** type in cast iron, stainless steel or bronze/aluminium.

All models with open-channel impeller have an axial adjustment system that maintains the impeller's balance for unchanged pump performance even at first signs of wear.

The **ACS (Anti-Clogging System)** consists of a spiral groove of suitable depth cut into the pump body.

This prevents clogging of the impeller even with highly fouled liquids, allows stringy items to be pulled out or unwound and renders the hydraulics clogging-proof.

## Cooling system (PATENTED)

The motor is cooled down by a **patented** closed-circuit internal re-circulation system.

This way, should any soiled liquid penetrate the oil chamber due to possible wear of the first mechanical seal, the fluid used in the process wouldn't be affected.

Continuous duty is ensured even in dry and partially submerged working conditions.

## Installation types

### Installation with coupling device (type P)

The vertical or horizontal coupling device is fixed to the bottom of the tank and the pump is lowered in with the aid of two guide pipes fitted earlier, until the connection to the foot is completed.

The delivery pipe is fixed to the coupling device discharge.

This device makes routine checks, any maintenance work or replacement of the pump extremely easy, with no need to empty the tank.

### Free installation (type S)

The pump, mounted to its base, rests on the floor of the tank in the vertical position. It is connected to the system via a flanged pipe connected to its discharge port. The pump may also be connected to a flexible hose using a flanged bend union connected to the outlet port. This facilitates removing the pump from the tank and is recommended for temporary installations.

### Vertical installation (type T) and horizontal installation (type Z) in dry chamber

The pump may be installed in a dry chamber by using a cooling jacket.

No external cooling fluid supply is required, since the motor is cooled by a PATENTED closed loop circuit with internal recirculation.

In **VERTICAL** dry installations, the pump is secured to a curved base to which the suction flange is mounted.

In **HORIZONTAL** dry installations, the pump is secured to a steel frame and the suction pipe is connected directly to the pump's suction flange.

### Undefined installation (type X)

The pump is not equipped for certain types of installation.  
This is the variant recommended for holding in stock.

## Features

ZENIT UNIQA submersible electric pumps. Designed for heavy-duty professional applications, they are used in civil and industrial wastewater treatment plants, lifting sewage, pumping industrial sludges and rainwater containing solids, and recycling raw or activated sludges and biological liquids.

ZENIT UNIQA series motors are designed with the aim of achieving the Premium (IE3) efficiency class according to EN 60034-30. The entire range is available in the "dry" version, which requires no external liquid inputs and allows the pump to operate continually (S1 duty type) even if partially submerged or installed in a dry chamber.

Non standard diameters are available for optimal performance on the specific duty point.

- The UNIQA series features a modular design in which the motor and hydraulics are perfectly coupled to each other, thus creating a robust and highly reliable assembly.
- Maximum operating temperatures to NEMA class A.
- Motor case, impeller and hydraulics in cast iron/stainless steel.
- High efficiency electric motors to class Premium (IE3).
- Models available for 50 and 60Hz power supplies.
- Thermal cutout integrated into stator to safeguard the motor even in heavy duty and continuous service.
- Long life lubricated bearings (50,000 hours).
- AISI 431 motor shaft. Available in NITRONIC 50 on request.
- Sensors for detecting water penetration into the mechanical seal oil sumps, motor compartment and terminal box.
- Two silicon carbide mechanical seals in large oil sump and V-rings.
- Available with high performance channel or vortex impellers.
- Hydraulics with discharge ports from DN65 to DN500.
- Full free passage for vortex impeller models, min. 80mm for channel impeller models.
- Patented closed jacket cooling system with internal recirculation.

## ZUG OC 200C - 6 poles

### Open channels Impeller

Discharge	DN200
Free passage	100 mm
Power	75 - 90 kW
Poles	6

The documentation for each model as well as the technical data sheets and user manuals are available at [www.zenit.com](http://www.zenit.com) or from Customer Service.

### Performances

Characteristic curves according to UNI EN ISO 9906

### Motor data

Hydraulics	Motor	V	Phases	Start	A	P1 (kW)	P2 (kW)	η mot.

## Performances

Characteristic curves according to UNI EN ISO 9906

## Motor data

Hydraulics	Motor	V	Phases	Start	A	P1 (kW)	P2 (kW)	η mot.
ZUG OC 300B	90/4 AW (D)	400	3	Y Δ	160	94.5	90	95.2
	110/4 AW (D)	400	3	Y Δ	198	115.3	110	95.4
	132/4 AW (D)	400	3	Y Δ	238	138.0	132	95.6
	160/4 AW (D)	400	3	Y Δ	299	167.0	160	95.8
	185/4 HW	400	3	Y Δ	342	194.5	185	95.1

W: WET version (submerged operation - S1 duty type)

D: DRY version (dry operation - S1 duty type)

## ZUG OC 300C - 6 poles

### Open channels Impeller

Discharge	DN300
Free passage	150x110 mm
Power	75 - 90 kW
Poles	6

## Nameplate

- (1) Product name
- (2) Year of manufacture
- (3) Version
- (4) Serial number
- (5) Voltage and current (delta connection)
- (6) Voltage and current (Y connection)
- (7) Frequency
- (8) Power factor
- (9) Rpm
- (10) Maximum ambient temperature
- (11) Motor power output

- (12) Motor efficiency
- (13) Motor insulation class
- (14) Motor reference standards
- (15) Duty type
- (16) Casing protection rating
- (17) Nominal diameter of impeller
- (18) Maximum and minimum head
- (19) Minimum and maximum flow-rate
- (20) Maximum immersion depth
- (21) Weight
- (22) -EX mark
